

Amendment to the Claims:

This listing of claims will replace all versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently amended) A system for printing electronic files comprising:
 - means adapted for receiving an electronic file, wherein the electronic file is representative of a document;
 - means adapted for prompting a user for print setting information corresponding to the electronic file, the print setting information including at least one of a desired property including stapling, hole punching, output destination, number of copies, orientation, collating, and finishing;
 - means adapted for generating print setting information data;
 - means adapted for storing the generated print setting information data in an associated storage;
 - association means adapted for associating the print setting information data with the electronic file;
 - conversion means adapted for converting the electronic file to an image file;
 - means adapted for creating a print job by associating in accordance with the image file ~~with~~ and the print setting information data;
 - means adapted for receiving data representative of a user request to select the print job for output to at least one selected destination, the at least one selected destination including at least one of a printed copy of the document, an e-mail inclusive of the image file, and an electronic copy of the image file; ~~and~~
 - means adapted for receiving primary output request data representative of a user request to output the print job;-
 - means adapted for outputting at least a first copy of the image file in accordance with primary received output request data;
 - means adapted for receiving secondary output request data representative of a user request for at least a second output of the electronic file;

means adapted for retrieving, from the associated storage, print setting information data corresponding to the electronic file in accordance with a received secondary output request data; and

means adapted for outputting at least a second copy of the electronic file in accordance with retrieved print setting information data corresponding thereto.

2. (Cancelled)

3. (Original) The system of claim 3, wherein the at least one command is in a printer job language format.

4. (Original) The system of claim 1 wherein the means adapted for creating a print job includes a printer driver.

5. (Original) The system of claim 1, further comprising storage means adapted for storing the print job.

6. (Currently amended) The system of claim 1, further comprising:
means adapted for receiving at least one additional electronic file, wherein the at least one additional electronic file is representative of a document image;
means adapted for specifying at least one additional print setting information data;
means adapted for creating at least one additional print job by associating the at least one additional electronic file with the specified print setting information data;
means adapted for receiving data representative of a user request to select the at least one additional print job; and
means adapted for receiving output request data representative of a user request to output the at least one additional print job to a selected output destination.

7. (Currently amended) A method for printing electronic files comprising:
receiving an electronic file, wherein the electronic file is representative of a document;

prompting a user for print setting information corresponding to the electronic file, the print setting information including at least one of a desired property including stapling, hole punching, output destination, number of copies, orientation, collating, and finishing;

generating print setting information data;

storing generated print setting information data in an associated storage;

associating print setting information data with the electronic file;

converting the electronic file to an image file;

creating a print job by associating in accordance with the image file with and the print setting information data;

receiving data representative of a user request to select the print job for output to at least one selected destination, the at least one selected destination including at least one of a printed copy of the document, an e-mail inclusive of the image file, and an electronic copy of the image file; and

receiving primary output request data representative of a user request to output the print job;

outputting at least a first copy of the image file in accordance with received primary output request data;

receiving secondary output request data representative of a user request for at least a second output of the electronic file;

retrieving, from the associated storage, print setting information data corresponding to the electronic file in accordance with a received secondary output request data; and

outputting at least a second copy of the electronic file in accordance with retrieved print setting information data corresponding thereto.

8. (Cancelled)

9. (Original) The method of claim 8, wherein the at least one command is in a printer job language format.

10. (Original) The method of claim 10, wherein the print job is created with a printer driver.

11. (Currently amended) The method of claim 10, further comprising:
receiving at least one additional electronic file, wherein the at least one additional electronic file is representative of a document image;
specifying at least one additional print setting information data;
creating at least one additional print job by associating the at least one additional electronic file with the specified print setting information data;
receiving output request data representative of a user request to select the at least one additional print job; and
receiving data representative of a user request to print the at least one additional print job.

Claims 12-22 (Cancelled)
